Object Discovery

A systematic approach to developing object-oriented systems

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 1

Object Discovery

Object Technology, 1998

Session One

Overview of the Workshop

Introduction to the Discovery Method

Workshop Streams

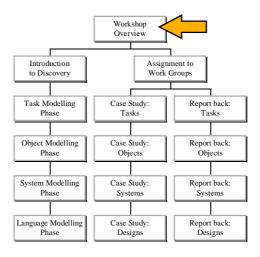

- **OTutorial:** the Discovery Method
 - O learn about particular techniques
 - O learn how to sequence them
- **OCase Study: Options Organiser**
 - O data validation, constraint solving
- **OWorking Groups: Developer Teams**
 - O distinguished players act as clients
- **OReporting: Experiences**
 - O how far did you get?
 - what worked and what did not?

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 3

Object Discovery

Object Technology, 1998

Voyage of Discovery

Background to Discovery

OThird-Generation

- 1st "naive" generation, circa 1990
- 2nd "eclectic" generation, circa 1994
- 3rd "selective" generation, circa 1998

OInfluences

- OBA/Graham/Jacobson/Gilb analysis
- RDD/OOSE object modelling
- O JSP/Harel control, ERM data modelling
- O RDD/Design Patterns system architecture
- O Fusion/Z detailed design and specification

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 5

Object Discovery

Object Technology, 1998

Background to Discovery

OCase Studies

- O Reengineer 10-year old CAD
- Glass gob manufacture
- O Personal and business loans
- In-flight shopping and entertainment
- O Academic registration and tracking
- O Course options organiser

OAffiliation

- OPEN Consortium (30+)
- OPEN Working Groups (~15)
- OPEN Process and Metamodel

Principles of Discovery

- **O** Transformational
 - ...versus elaborational
 - o current into required (cf SSADM)
 - O analysis into design (cf SSADM)
 - O seamlessness versus traceability
- **OCognitive Focus**
 - O power of abstractions (cf Gestalt)
 - O plasticity of early models
 - O selective use of techniques
 - "discovery procedures"

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 7

Object Discovery

Object Technology, 1998

Power of Abstraction

Principles of Discovery

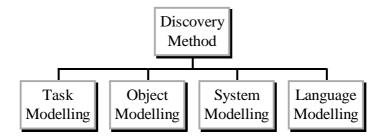

- **O Technical Process**
 - respect focus of techniques
 - O sequence inputs and outputs
 - O cross-check overlapping models
 - O provide systematic guidelines
- **O**Communication
 - o continuous client involvement
 - uncluttered visual models
 - presentation and feedback
 - **o** setting priorities

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 9

Object Discovery

Object Technology, 1998

Phases of Discovery

Phases of Discovery

OTask Modelling Phase

- **○** interviewing techniques
- system task identification
- O narrative modelling
- construction of vocabularies
- O scripting in restricted grammar
- o task priority matrix

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 11

Object Discovery

Object Technology, 1998

Phases of Discovery

Object Modelling Phase

- O object identification through behaviour
- O responsibility/collaboration analysis
- O delegation, feedback from Design Patterns
- interaction diagram (object messaging)
- data modelling (back-end)
- control structures (front-end)

Phases of Discovery

OSystem Modelling Phase

- O collaboration diagram (object connections)
- O cohesion/coupling analysis
- O system layering using aggregation
- O system layering using generalisation
- O feedback from frameworks and components
- application scavenging

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 13

Object Discovery

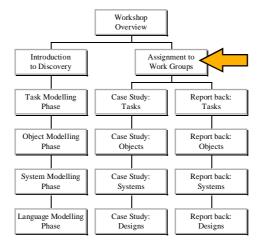

Object Technology, 1998

Phases of Discovery

OLanguage Modelling Phase

- O lifetime and visibility analysis
- attribute/relationship structure
- O execution graphs (end-to-end computation)
- method signature specification
- O method pre- and postconditions
- O class specification sheets

Voyage of Discovery

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 15

Object Discovery

Object Technology, 1998

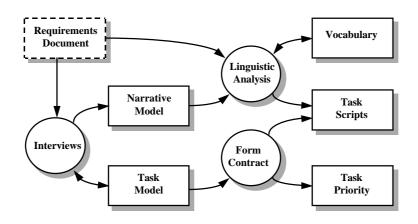

Session Two

Discovery Task Modelling Phase:

Requirements Engineering

Discovery: Task Modelling

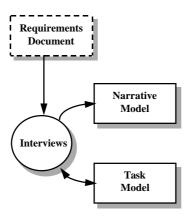

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 17

Object Discovery

Object Technology, 1998

Interviews

Goals of Interviewing

- **OEstablish Business Model**
 - whole business context
 - O human and machine interactions
 - O natural business constraints
- **OCapture Client Concerns**
 - important make-or-break
 - O social, political factors
- **OEstablish Feasible System**
 - automation boundary
 - o costs and benefits

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 19

Object Discovery

Object Technology, 1998

Interviewing Bias

- **OThe Client**
 - total understanding of problem
 - implicit, compiled expertise
 - **O** limited explicit formulation:
 - O single or narrow goals
 - existing procedures, interfaces
 - O "requirements" unreliable
- **OThe Developer**
 - limited understanding of problem
 - early explicit incomplete formulation:
 - competence in systems
 - o aware of rationalisations

Non-directive Interviewing

- **OModelling Assumptions**
 - O Don't impose your own object-model
 - O Let client express their own business model
- **Ouestion Presuppositions**
 - O Don't lead with "what X do you do/have?"
 - O Use open-ended questions "tell me about..."
 - O Don't use multiple-choice, multi-part
- **OActive Listening**
 - O clarification "let me see if I got this right..."
 - o summarisation "first, you do X, then ..."

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 21

Object Discovery

Object Technology, 1998

Directed Interviewing

- **OStakeholders**
 - O viewpoint analysis by stakeholder
 - O bluesky, win-win scenarios
- **OTask-centred**
 - mission-critical task(s)
 - task dependency:
 - O independent, concurrent (thread)
 - O precursor, consequent (logical)
 - O upstream, downstream (time-order)

Directed Interviewing

O"Wh"-questions

- O who stakeholders, actor-rôles
- O what primary tasks, by rôle
- O how business process, subtasks
- O why logical justification, dependent tasks
- O when time constraints, dependent tasks
- O where impl. constraints, boundaries
- O subtasks reveal new actor-rôles
- O continue until no new tasks revealed

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 23

Object Discovery

Object Technology, 1998

Build the Task Model

ORationale

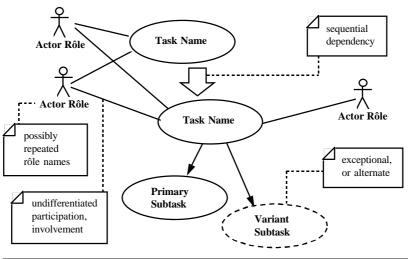

- high-level model of business
- O communication visual impact
- client feedback (corrections)
- developer feedback (rationalisations)

OTechnique

- O sketch tasks during interviews
- o structure task model
- o present to client, revise
- O suggest optimisations, revise

Task Sketch Syntax

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 25

Object Discovery

Object Technology, 1998

Structure Task Model

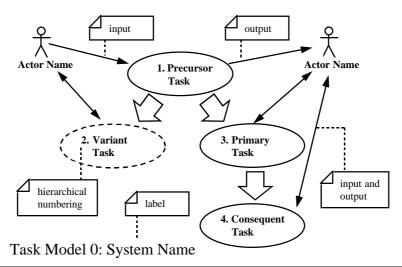

ORationale

- O captured n tasks in a flat sketch
- O variable granularity, crossed lines
- O compose hierarchy by rules

OTechnique

- O cluster tasks by focus, goal, purpose
- O preserve contiguous boundaries
- o aim for 2-5 tasks per level
- prefer to avoid crossed lines
- isolate actor participation types

Task Model Syntax

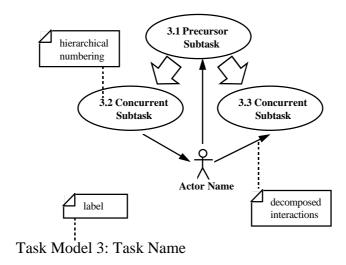

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 27

Object Discovery

Object Technology, 1998

Task Model Syntax

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 28

Task Model Checks

- **OClient revision**
 - check structure is meaningful
 - check participants all present
- **ODeveloper revision**
 - isolate actor interfaces
 - O propose task migration
- O Cross-checks
 - o ensure contiguous clusters
 - O propagate participation types by level
 - O constraints on model size, crossed lines

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 29

Object Discovery

Object Technology, 1998

Build the Narrative Model

- **O**Rationale
 - storytelling cognitively relevant
 - O natural business process paradigm
 - O client's natural language
- **OTechnique**
 - O complete for each task, subtask
 - o identify actor rôles, materials
 - o identify prerequisites, postrequisites
 - O describe tasks, including:
 - O subtask dispatch points
 - O alternate task branch points
 - O exception task break points

Narrative Model Syntax

| Narrative Model 0.0: Title of Task | | Author | Date | Revision | |
|--|--|--------|------|----------|--|
| Purpose: Actor Rôles: Materials: | summary of task goals participants at this level (may elide) documents and artefacts used (may elide) | | | | |
| Prerequisites: | material constraints/availability, actor states/preparedness, logical dependency, sequential dependency. | | | | |
| Description: | Natural-language description of task, which may include dispatch points for sequential or concurrent subtasks, branch points for alternate tasks and break points for exceptional tasks. Any rules, conditions, events recorded in the most natural way. | | | | |
| Exceptions: | Natural-language description of abnormal termination cases. | | | | |
| Postrequisites: | revised material constraints and actor states, validation statement of completeness, e.g. with respect to dependent tasks. | | | | |

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 31

Object Discovery

Object Technology, 1998

Narrative Model Syntax

O Presentation options

- O embed dispatch points in a single paragraph
- O organise by subtask, summarise under subheadings
- O organise by business rule, summarise under subheadings
- include exceptions at end of description
- O dispatch to exception tasks at break points

Task 1.1: Name Summary of subtask

Task 1.2: Name Summary of subtask

Summary of first subtask [Task 1.1]. Summary of second subtask [Task 1.2].

Narrative Model Checks

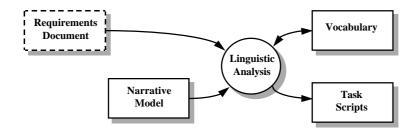

- **OClient Revision**
 - check completeness of detail
 - O check business logic makes sense
- **OCross-Checks**
 - O narrative produced for each task
 - O uses only those actors, materials listed
 - O prerequisites enabled by precursors
 - O postrequisites enable successors

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 33

Object Discovery

Object Technology, 1998

Linguistic Analysis

Build the Vocabulary

ORationale

- O client vocabulary is rich, context-dependent
- O possible repeated, ambiguous concepts
- O "boil down" the domain vocabulary

OTechnique

- o identify primary, secondary NPs, Vs
- o identify AdjPs, AdvPs, PPs
- o attribute AdjPs, secondary NPs to NPs
- O attribute AdvPs, (phrasal) Preps to Vs
- cluster concepts, reduce
- O validate vocabulary with client

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 35

Object Discovery

Object Technology, 1998

Vocabulary Clustering

| level N student year of study | Description | Master | Part | Item | |
|--|---|---------------------------------------|--|--|--|
| core Adj module obligatory for degree free Adj module module arbitrary course un | study programme degree course unit registered for degree year of study optional course unit obligatory for degree optional for degree arbitrary course unit prioritise approved module choices assign students to | student degree module module | N N N N N Adj Adj Adj | degree module student level option core approved free select | |

Build the Scripts

ORationale

- O re-express tasks in core vocabulary
- abstract from physical context
- abstract from user interface

OTechnique

- O use only the core vocabulary
- O express in restricted grammar
- complete 1+ scripts for each narrative
- O formalise pre-, postconditions
- o adjust vocabulary
- adjust task decomposition

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 37

Object Discovery

Object Technology, 1998

Restricted Grammar

OGraham's SVDPI

Subject Verb DirectObject
[Preposition IndirectObject]

OSimons' TCA

Test Condition Action

Test ::= IF | WHILE | WHEN

Condition ::= Subject Verb [Complement] Action ::= [THEN | ELSE | DO] SVDPI

Restricted Grammar

OSimplify Narrative

- \bigstar
- \circ reduce full NL to simple active sentences
- O may yield object-stimulus-object patterns
- **OAdjust Vocabulary**
 - O productive in forcing generalisations
- **OAdjust Tasks**
 - O productive in simplifying control structures

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 39

Object Discovery

Object Technology, 1998

Task Scripts

| Script 2.1: Loan Application | Author | Date | Version | | | |
|--|--------|------|---------|--|--|--|
| PRE true; | | | | | | |
| the customer completes a loan application; IF the manager approves the loan application THEN the clerk sends an acceptance letter to the customer ELSE the clerk sends a rejection letter to the customer; | | | | | | |
| POST IF loan application is approved THEN customer has acceptance ELSE customer has rejection le | | | | | | |

Task Scripts

| Script 2.2: Loan Financing | Author | Date | Version | | |
|---|--------|------|---------|--|--|
| PRE loan application is approved; | | | | | |
| the manager forwards the loan application to the banker; the clerk opens a new loan account for the customer; WHEN the manager receives a finance note from the banker DO the clerk sends a repayment schedule to the customer; | | | | | |
| POST the banker has the loan application; the loan account is open; the customer has a repayment schedule; | | | | | |

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 41

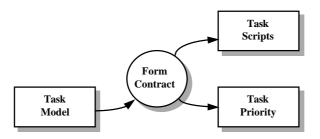

Object Discovery

Object Technology, 1998

Script Checks

- **OClient revision**
 - O vocabulary is adequately subtle
 - O stylised scripts retain business process
- **OCross-checks**
 - O every narrative has one or more scripts
 - o each NP, V, ... defined in vocabulary
 - O narrative rôles, materials preserved
 - o narrative business logic preserved
 - o postconditions entail postrequisites
 - inception and completion formally defined
 - O concrete, testable pre-, postconditions

Form Contract

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 43

Object Discovery

Object Technology, 1998

Form Contract

ORationale

- O select system components
- o agree system specification
- o agree delivery schedule
- agree pricing strategy

OTechnique

- O construct priority matrix
- o add client, developer factors
- prioritise tasks by category
- o agree specification, schedules
- o sign off contract

Task Priority Matrix

| Task | OrdId | CliPri | DevPri | EasDev | Priority |
|--|-------------|-------------|-------------|-------------|-------------------|
| 1 Registration | | | | | 398.3 |
| 1.1 UGrad Pre-reg.1.2 UGrad Registration1.3 PGrad Registration | 5 5 4 | 5 5 5 | 5 5 4 | 3 4 4 | 375 500 320 |
| 2 Academic Progress | | | | | 310.7 |
| 2.1 UGrad Re-reg. | 5 | 5 | 5 | 4 | 500 |
| 2.2 Course Changes | | | | | 216.0 |
| 2.2.1 Module Add/Drop 2.2.2 Degree Change | 4 4 | 5 4 | 4 3 | 3 4 | 240 192 |
| 3 Alumni Tracking | 3 | 3 | 2 | 4 | 72 |

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 45

Object Discovery

Object Technology, 1998

Priority Factors

- **Order of Identification**
 - O high score for mission-critical task
 - o middle score for client-identified task
 - O low score for developer-suggested task
- OClient and Developer Priority
 - O client's sense of task urgency
 - O developer's sense of task dependency
 - o invert cost, difficulty: ease of development
- **OScore to Chosen Depth**
 - multiply factors for leaf nodes
 - O average *leaf* scores for other nodes

Rank Tasks

- o incremental delivery
- o guaranteed and run-on pricing
- future extensions

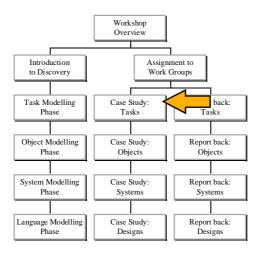

| 1.2 UGrad Registration 2.1 UGrad Re-reg. | 500 500 | Essential |
|---|-------------------|-----------|
| 1.1 UGrad Pre-reg. 1.3 PGrad Registration 2.2.1 Module Add/Drop | 375 320 240 | Necessary |
| 2.2.2 Degree Change | 192 | Desirable |
| 3 Alumni Tracking | 72 | Optional |

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 47

Object Discovery

Object Technology, 1998

Voyage of Discovery

Session Three

Discovery Object Modelling Phase:

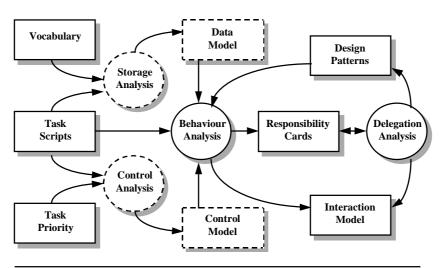

a Responsibility-Driven Approach

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 49

Object Discovery

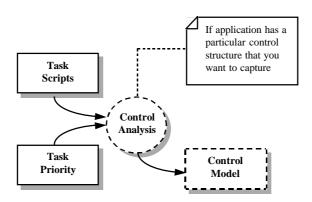

Object Technology, 1998

Discovery: Object Modelling

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 50

Control Analysis

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 51

Object Discovery

Object Technology, 1998

Control Model

OHierarchical

- free selection of tasks
- impose menu structure
- O use e.g. JSP-style structure chart

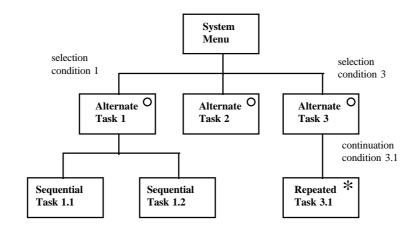

OEvent-Driven

- o tasks enabled, disabled
- impose abstract state model
- O use e.g. Harel-style state chart

OAsynchronous

- shared access to tasks
- O use e.g. Petri Net, UML Activity Diagram

Hierarchical Control Model

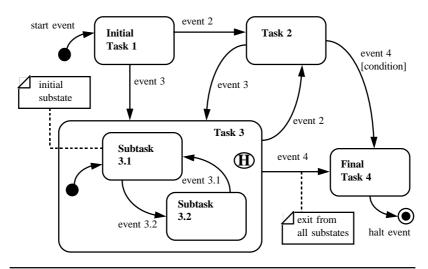

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 53

Object Discovery

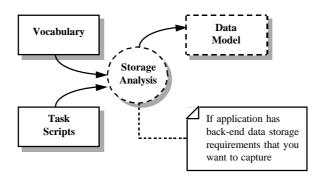

Object Technology, 1998

Event-Driven Control Model

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 54

Storage Analysis

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 55

Object Discovery

Object Technology, 1998

Data Model

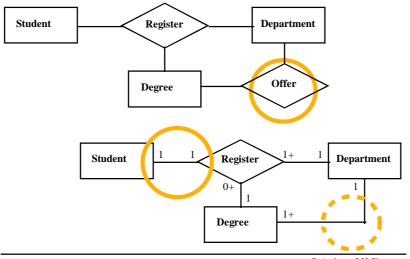

ORationale

- O optimise data storage model
- o interface with relational DBMS
- O no overlaid "object model" semantics

OTechnique

- entities from NPs + storage Vs
- O build ERM using associations
- O eliminate redundant paths
- o encapsulate M:N, ternary, and higher
- O link dependent to master entities

Entity-Relationship Transformations

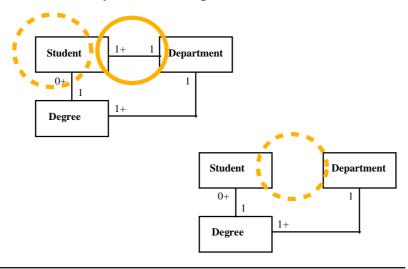

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 57

Object Discovery

Object Technology, 1998

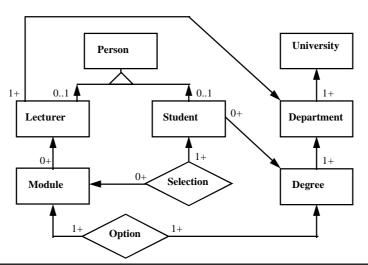

Entity-Relationship Transformations

Discovery Method Version 1.0: January 1998

© Anthony J H Simons Slide 58

Data Model

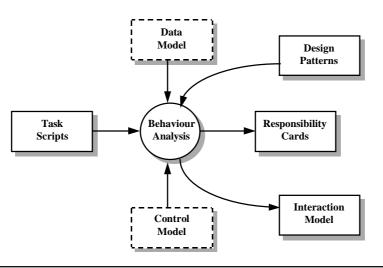

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 59

Object Discovery

Object Technology, 1998

Behaviour Analysis

Discovery Method Version 1.0: January 1998

© Anthony J H Simons Slide 60

Behaviour Analysis

ORationale

- O objects are agents with a purpose
- O classify by external behaviour
- distribute system functionality

OTechnique

- O use catalogue of rôles, design patterns
- o identify responsible agents from scripts
- O include any data-managers, controllers
- write responsibility cards
- build interaction model

 \Rightarrow

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 61

Object Discovery

Object Technology, 1998

Pattern Catalogues

OCategories

- O model, support, viewer, controller, stream
- O business objects, system objects, data objects, event handlers, command interfaces

ODesign Patterns

- STL, Booch: Bridge
- OERM: Observer, Mediator, Bridge
- O RDD: Mediator, Template Method, Command, Chain of Personalistics
 - of Responsibility
- O EDD: Command, Composite, Chain of Responsibility

Objects from Scripts

OResponsibility

- O who is responsible for the VP activity?
- o could be S, D, I or other

OExamples

O subject responsibility:

the **manager** *forwards* the **loan application** to the **banker**; the **clerk** *opens* a new **loan account** for the **customer**;

object/other responsibility:

the **manager** asks the **banker** for the **funds**; the **student** supplies his/her **student details** for the **registration form**; the **borrower** borrows the **book**;

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 63

Object Discovery

Object Technology, 1998

Verb Phrase Indicators

Oact upon/request

- direct object responsible for handling;
- O subject responsible for initiating

Otransmit/send

- subject responsible for sending;
- o indirect object responsible for receiving/handling

Oprovide/supply

- O neither actor-subject nor form-object
- O usually, some other clerk or manager

Responsibility Cards

ORationale

- o generalisation of CRC cards
- o identify objects by responsible rôles
- O keep active agent perspective

OTechnique

- O group script clauses by agent responsible
- O cluster VP actions by goals
- 2-5 coarse-grained responsibilities
- identify collaborators
- O assign data on need-to-know basis
- assert invariants for concept

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 65

Object Discovery

Object Technology, 1998

Front of Card

| Name: object name | Author Date | Version | | | | |
|--|--|---------|--|--|--|--|
| Purpose: Statement of purpose, no more than two lines of text, describing the overall rôle or goal of the object-concept identified above | | | | | | |
| Responsibilities: | Collaborators: | | | | | |
| Coarse descriptions of purpose, breaking down the overall statement above; | The objects involved in helping this one to achieve its purpose; | | | | | |
| The individual goals of the object, rather than each proposed method; | The objects to which this object delegates some of its responsibility; | | | | | |
| Responsibilities for <i>knowing about</i> , and for <i>doing</i> things; | Index each sub-contractor object; | | | | | |
| Enumerate 2-5 (general) statements. | List participating collaborators, by index, against each responsibility statement. | | | | | |

Reverse of Card

Classification:

Suggested classification of the object concept, such as: unique instance, rôle in a pattern, or class-level concept. Relationship to other concepts, such as is-a, a-kind-of, part-of.

Attributes:

Data attributes discovered for this object, part of its concrete state;

Data assigned on a need-to-know basis to the object which must use it;

Data assigned to the object which manages and protects the information.

Invariants:

Constraint rules relating the different attributes' values to each other;

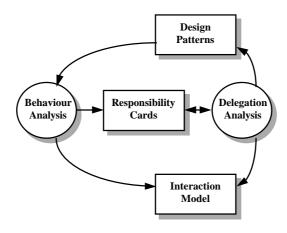

Conditions describing states which this object may not legally enter;

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 67

Object Discovery

Object Technology, 1998

Delegation Analysis

Delegation Analyis

ORationale

- O second part of behaviour analysis
- O break down over-burdened objects
- O force decentralisation of functionality

OTechnique

- O focus on levels of responsibility
- O apply RDD decomposition rules
- O continue until atomic message level
- Chain of Responsibility patterns
- build interaction model

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 69

Object Discovery

Object Technology, 1998

Decomposition Rules

OCard Size

- O refine to 2-12 atomic services
- O over 6 consider, over 12 mandate decomposition

ODelegates

- O responsibilities are cohesive
- delegate to subcontractors

OPeers

- O responsibilities may be partitioned
- O split into two or more peers

OParents

O responsibilities overlap - hive off to parent

Responsibility Card Checks

- OClient/developer review
 - coherent object abstractions
 - O plausible ownership of responsibility
- **OCross-checks**
 - O scripts:
 - O VPs map to atomic services,
 - O external NPs removed as actors, but tasks managed
 - O passive NPs demoted to attributes
 - O active NPs map to objects
 - O storage objects: data assigned to data-users
 - o interface/controller objects: logic captured

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 71

Object Discovery

Object Technology, 1998

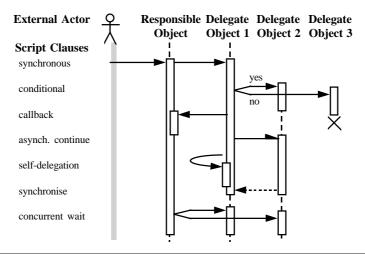

Build the Interaction Model

- **O**Rationale
 - complement responsibility cards
 - O check scripts against responsible objects
 - O provide message sequencing
- **OTechnique**

- distinguish internal/external
- list script clauses on LHS
- O responsible objects as timelines
- O each clause is one stimulus
- O recipient is responsible object

Interaction Model Syntax

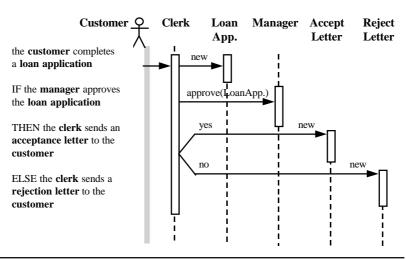

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 73

Object Discovery

Object Technology, 1998

Interaction Model

Discovery Method Version 1.0: January 1998

© Anthony J H Simons Slide 74

Interaction Model Checks

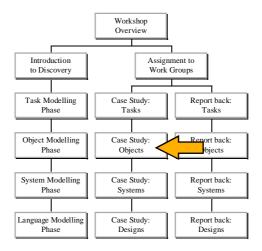

- **OConsistency checks**
 - Single threads:
 - every case managed by one object
 - o comb or ladder, no returns
 - O Multiple threads:
 - O focus of control shifts
 - O returns to wake up
- **OCross-checks**
 - O script coverage VPs map to stimuli
 - O top timeline maps to main responsibility card
 - O collaborators map to delegated timelines

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 75

Object Discovery

Object Technology, 1998

Voyage of Discovery

Session Four

Discovery System Modelling Phase:

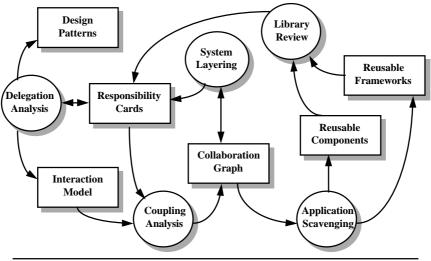

Optimising the Architecture in the Context of Frameworks

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 77

Object Discovery

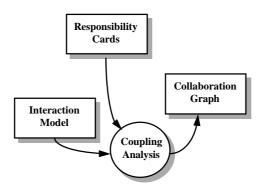

Object Technology, 1998

Discovery: System Modelling

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 78

Coupling Analysis

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 79

Object Discovery

Object Technology, 1998

Coupling Analysis

ORationale

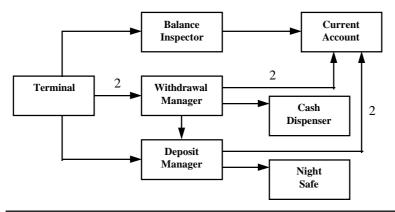

- O group together client-server messages
- O overview of total connections by usage
- O viewpoint needed for system layering

OTechnique

- walk through responsibility cards
- trace through interaction model
- Obuild collaboration graph:
 - O add new arcs for new client-server connections
 - o increment usage counts on old connections

Collaboration Graph

- overview of client-server connections
- O NOT snapshot of instance messaging

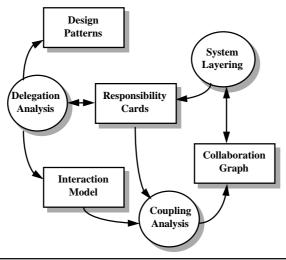

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 81

Object Discovery

Object Technology, 1998

System Layering

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 82

System Layering

ORationale

- o introduce modular hierarchy
- reduce inter-module coupling
- low complexity = easy implementation
- low dependency = more reuse

OTechnique

- aggregate over tightly-coupled subsystems
- O generalise over commonly-invoked services
- O generate new coordinating objects
- O update responsibility cards, interactions
- O harvest new Design Patterns

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 83

Object Discovery

Object Technology, 1998

Aggregate over Coupled Subsystems

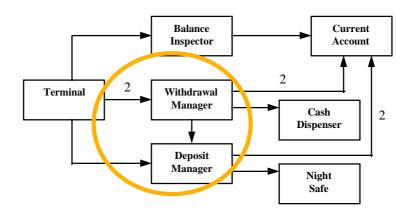

OWhat to look for

- closed loops, linked rings, doubly-linked rings in the collaboration graph
- O choose to enclose the collaborations that you wish to eliminiate (eg with high per-service counts)

OWhat to do

- invent new object abstraction *Mediator* that aggregates over components
- O remove inter-component collaborations
- subsystem services migrate up to *Mediator*
- Mediator communicates with components

Aggregate over Coupled Subsystems

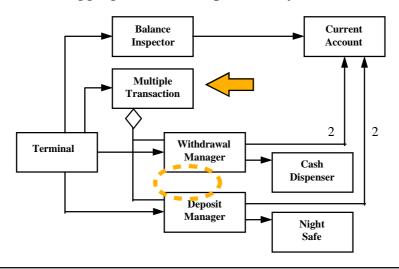

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 85

Object Discovery

Object Technology, 1998

Aggregate over Coupled Subsystems

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 86

Generalise over Common Services

OWhat to look for

- O objects whose interfaces overlap (server-end)
- O objects that invoke overlapping services (client-end)

OWhat to do

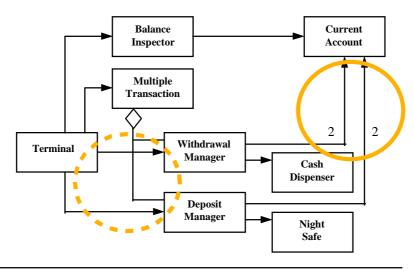

- invent new abstract parent, often a Command, that generalises over the components
- O remove component client/server collaborations
- O component collaborations migrate up to parent, become part of a *Template Method*
- Components redefine parts of the *Template Method* (eventually, using dynamic binding)

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 87

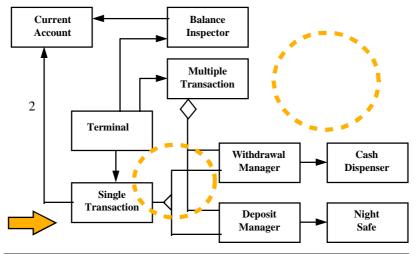

Object Discovery

Object Technology, 1998

Generalise over Common Services

Generalise over Common Services

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 89

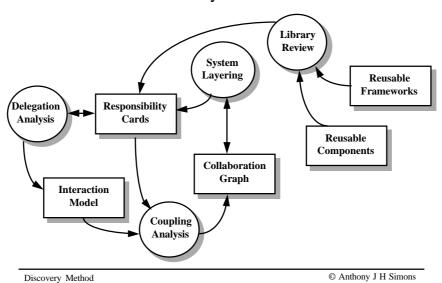

Object Discovery

Object Technology, 1998

System Layering Checks

- **OClient reviews**
 - O new abstractions may be meaningful
 - O may have data, states, life history
- **OCross-checks**
 - O equivalence of services, before and after
 - check Mediator interface, collaborations
 - o check Template Method hot-spots, binding
 - O subsystem objects have responsibility cards
 - O lifelines modified to reflect new pattern

Library Review

Object Discovery

Version 1.0: January 1998

Object Technology, 1998

Slide 91

Components

ODefinition

- O cohesive software element
- O reusable part (dual of framework)
- O directly implemented, available

OCoverage

- O domain-dependent (business object)
- O domain-independent (GUI, basic object)

Frameworks

ODefinition

- O domain-specific harness or shell
- reusable whole (dual of component)
- implementation (documented by Patterns)

OCoverage

- O horizontal: common layer or substrate
- O vertical: narrow business domain

OArchitectures

- O white-box: inheritance, effective subclasses
- O black-box: composition, components/interfaces

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 93

Object Discovery

Object Technology, 1998

Library Review

ORationale

- O maximise reuse of designs
- O plan for component integration
- O plan for framework integration

OTechnique

- examine application control structure
- 77
- compare with existing framework(s)
- O good match: import framework, rework the current design (cards, interactions, collaborations)
- poor match: schedule framework(s) for reengineering, deliver to existing design

Business Decisions

- **O**Alternatives
 - o import frameworks before system layering stage
 - O layer system before considering frameworks
- **ODecision criteria**
 - O cognitive: framework may bias perception of current system (eg OO-toaster)
 - O historical: maturity of existing framework
 - O pragmatic:
 - O real needs of the current system
 - cost of importing existing framework
 - O cost of reworking existing framework

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 95

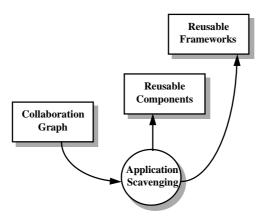

Object Discovery

Object Technology, 1998

Library Reuse Checks

- O Cross-checks
 - O equivalence of services, before and after
 - o no application service omitted
 - O no dangling hot-spots/missing methods
 - O control structure preserved (white-box)
 - only hot-spots have been specialised
 - O no internal dispatch points overwritten
 - state machines of subclasses only introduce substate machines, or orthogonal states (no overlapping)
 - control structure preserved (black-box)
 - O components supply expected interface
 - component methods pre-/postconditions satisfy "programming by contract" rules

Application Scavenging

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 97

Object Discovery

Object Technology, 1998

Application Scavenging

- **ORationale**
 - harvest new components
 - refactor existing framework(s)
- **OTechnique**
 - O proceed after 3+ applications
 - o generalise on business objects, control strategy
 - O white-box during evolutionary phase
 - O new Command, Template Method
 - O multiple levels of generalisation
 - O black-box when control stabilised
 - O refactor layer of controller objects
 - O plug-in points for business objects

Costs of Refactoring

- **ORefactor Class**
 - O(1): add method, add attribute
 - \bigcirc O(n²): reorganise internal dependency
- **ORefactor Inheritance**
 - O(n): add extended class specialise
 - \bigcirc O(n²): add overlapping class generalise, migrate
- **ORefactor Collaboration**
 - \bigcirc O(xⁿ): too many specialisation dimensions extract and encapsulate one degree of variation
 - \bigcirc $O(x^n)$: new focus of control different patterns of collaboration

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 99

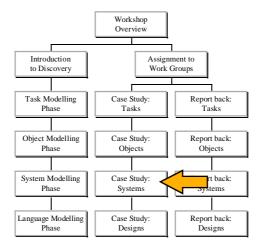

Object Discovery

Object Technology, 1998

Developer Rôles

- **OApplication Developer**
 - O focus: current application
- **OReuse Manager**
 - O focus: mapping onto components
- **OLibrarian**
 - O focus: defence of frameworks
- **OApplication Scavenger**
 - **O focus: extraction of components**

Attributes and References

Attribute Analysis

- **ORationale**
 - O extract managed data attributes
 - O enforce encapsulation rules
 - O maintain data invariants
- **OTechnique**
 - O prepare class design spec. sheets
 - O transfer attributes from responsibility cards
 - O mark up according to encapsulation rules
 - o private, or protected? not public!
 - O transfer invariants from responsibility cards

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 105

Object Discovery

Object Technology, 1998

Relationship Analysis

- **ORationale**
 - O extract references, embedded objects
 - o establish creation/deletion order
 - o enforce constant rules

OTechnique

- O determine client/server collaboration semantics
 - o input: exclusive, constant, connascent?
 - O output: embedding, references, constants
- O determine client/server lifeline closures
 - input: lifelines, collaboration semantics
 - output: create calls, create args, GC strategy

Collaboration Semantics

- **OPermanent/Temporary**
 - o already decided by the collaboration graph
- **OExclusive/Shared**
 - whether > 1 client may access server
- **OConstant/Mutable**
 - O whether server may be replaced
- OIndependent/Connascent
 - O whether server is born and dies with client

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 107

Object Discovery

Object Technology, 1998

Collaboration Semantics

OReferences vs Embedding

- O connascent + exclusive => client may embed server, or call create/delete
- otherwise, clients must reference server (or, a distinguished client may embed server)
- o add embedded objects/ references to class design specs.

OGC Strategy?

- connascent + shared => clients keep refcount on server for GC, delete when zero
- O otherwise, clients forget server, external object or system controls server lifetime

Lifeline Closure

ORelative lifetimes

- O closure visible from interaction diagrams
- O cross-check: connascence + mutability

OConstruction

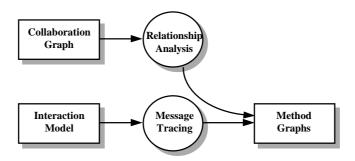

- O server lifeline contained: client embeds, or calls create/delete on server object
- O server lifeline not contained: client constructor accepts a server-argument
- add constructors to class design specs.

Object Discovery

Object Technology, 1998

Methods

Message Tracing

ORationale

- complete end-to-end processing
- O counteract yo-yo effect
- **O** documentation for implementors

OTechnique

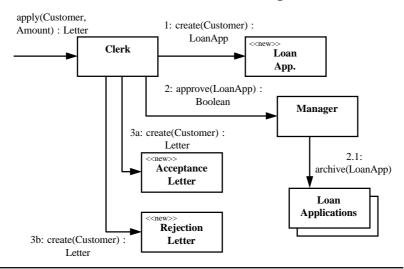

- trace system operations through interactions
- O build end-to-end method execution graph
- O determine method arguments:
 - O collaborations = permanent references
 - anything else = additional arguments
- O mark creation, distribution semantics

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 111

Object Discovery

Method Execution Graph

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 112

Formal Analysis

Discovery Method Version 1.0: January 1998 © Anthony J H Simons Slide 113

Object Discovery

Object Technology, 1998

Formal Analysis

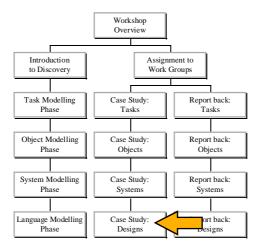

ORationale

- O guarantee contract specification
- O correct operation of methods
- specification for testers

OTechnique

- O transfer method protocols to class spec. sheets
- O check for partial semantics against scripts
- specify method preconditions
- O check for success criteria against scripts
- specify method postconditions

Thank-you for your participation;
I hope we learned some useful things from each other!
